

China, forest fire alarm system, multi-hop wireless & thermal camera

Features:

- . Avg. distance between each hop: > 10km
- . Using solar power and wind power
- . Robust enclosure to operate in forest environment

China, forest fire alarm system, multi-hop wireless & thermal camera

Client feedback:

The wireless solution integrated with solar & wind power and thermal camera system, providing an alarm mechanism to monitor the forest anytime.

It runs 24-7 for years without failure, so it's easy for maintenance.
